

TOWN OF NANTUCKET SEWER DEPARTMENT

WASTEWATER MANAGEMENT

SEA STREET PUMP STATION SEWER FORCE MAIN NO.3 S. SHORE ROAD FULL-DEPTH RECLAMATION AND PAVING

Dear Resident:

The Town is implementing a sewer project that will include the installation of a new sewer force main that will connect the Sea Street Pump Station (SSPS) to the Surfside Wastewater Treatment Facility (SSWTF). The project will also include upgrades to water, sewer, stormwater, and other utilities along the Town-approved sewer force main route.

The next phase of construction includes the final full-depth reclamation and paving of South Shore Road beginning the week of October 7, 2024. A cape cod berm will be installed on either side of the roadway and the bike path will be overlaid with a final layer of continuous pavement. The work will take place between the hours of 7:00 AM and 5:00 PM, Monday through Friday, and is anticipated to take three weeks to complete.

During construction, South Shore Road will operate under one-lane alternating traffic. Local detours and roadway shutdowns will be implemented both during and outside of working hours. Police detail officers and/or flaggers along with the construction crew will make every effort to accommodate and assist residents in accessing their homes.

We appreciate your understanding and patience as the Town continues to implement this critical and important project.
