Gloucester, Griffin and Willan Road closures and parking suspensions

Works starting Monday 6, January 2025

Work to remove and relocate the electrical power cables on the former Tangmere site

Look inside for more information on:

- Road closure on Gloucester, Griffin and Willan Road.
- Parking bay suspensions while UK Power Networks (UKPN) carry out the works.
- Why the works are being undertaken and how long it will take.

Improving Broadwater Farm together

Haringey LONDON

Removal and relocation of electrical power cables on Gloucester, Griffin and Willan Road.

UKPN will be decommissioning the electrical substation and removing and relocating the power cables on the former Tangmere site. They will start on site on Monday 6 January 2025 and plan to be finished by the end of March 2025.

There will be more noise and disruption during this time and at some stages we will need to close some areas of Gloucester, Griffin and Willan Road and suspend some parking bays to allow UKPN to carry out the work.

Road closures will occur between 10pm to 6am on the below dates to ensure bus routes can continue during the daytime as usual.

Road closures

Gloucester Road – road closure	7, 14, 18 and 19 January 2025. *
Willan Road – road closure	Partly closed but accessible to cars and other small vehicles on various dates during the works. *

* Road closure and diversion notices will be displayed before and during the course of the work.

Please note some road closures may change during the works, but notices will be displayed if this happens.

Parking bay suspensions

Some parking bays will be closed on Gloucester, Willan and Griffin Roads during the work.

Notices will be displayed before the bays are closed letting residents know they cannot park there and how long the bay will be suspended.

Why does UKPN need to remove and relocate the electrical power cables?

We are unable to continue with the controlled demolition at Tangmere until the electrical substation currently located on the site has been decommissioned and the power cables relocated.

Once UKPN has decommissioned the former Tangmere substation and relocated the power cables they will install a new electrical feed for the energy centre in Northolt.

What is an electrical substation?

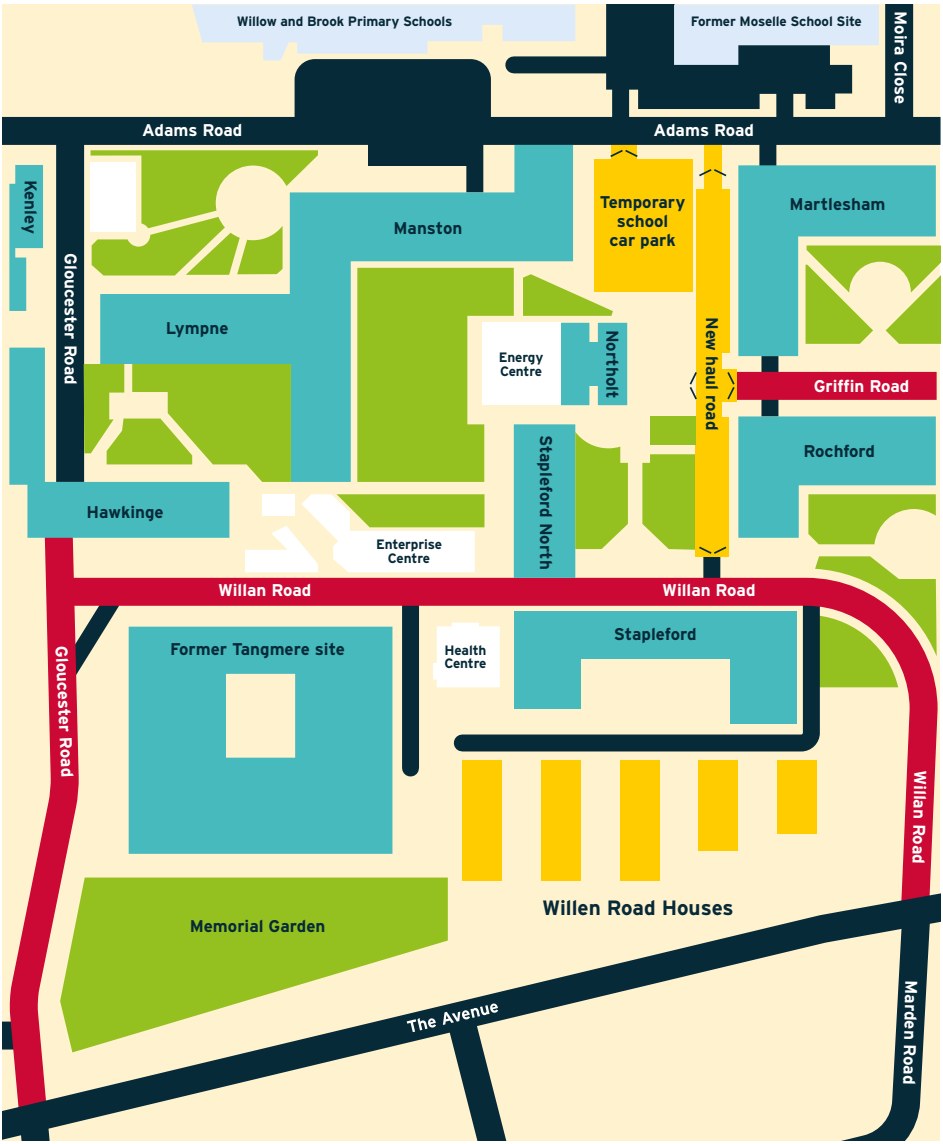

A substation reduces electricity voltage so it's safer to deliver electricity to your home. UKPN has thousands of electricity substations around London, with many located on estates like Broadwater Farm.

Will the work impact the electrical supply to my home?

There won't be any impact on the electrical supply to any homes on the estate during the work.

Safety measures

The road closures and parking suspensions will be between 10pm to 6am. These closures and parking suspensions will allow traffic to move safely and reduce the impact on pedestrians, road traffic and bus routes.

The roads highlighted in **red** will be closed on the dates shown.

Work will start in January 2025 and is due to complete in March 2025.
