Re: Mayer/David Rd Sewer Separation Project

Dear Resident:

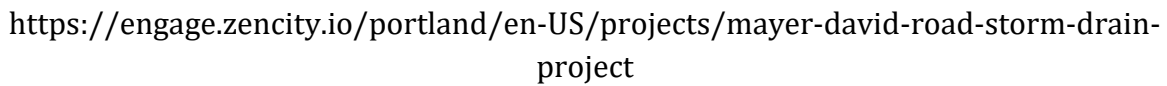

The Portland Department of Public Works would like to invite you to a neighborhood meeting to review and provide feedback on a proposed design for the Mayer/David Road Sewer Separation Project. Construction of this project is expected to begin in the Spring of 2027. A map at the end of this notice will assist in defining the project boundaries and a link to the project website is attached below.

The meeting is scheduled for **Monday November 9th, 2026 from 6 PM – 7 PM.** at **Public Works 250 Canco Road in the Conference Room.** Please join us to learn more about what the project intends to achieve.

This project will involve separating storm water from the sanitary sewer system to reduce the risk of combined sewer overflows (CSO) into the Fore River. This project is one of several that the City has undertaken in recent years to reduce combined overflows and protect the economic and environmental health of Casco Bay. Based on average rainfall for the area, the project intends to return an estimated 7.2 million gallons of rainwater annually to its pre-development watershed. This project will provide passive stormwater treatment through rain gardens maintained by the City installed within the roadway esplanade.

As a part of this project, the Contractor will also be replacing drinking water mains and service lines for the Portland Water District (PWD). New roadway/sidewalk improvements will also be completed above ground within the neighborhood.

On the Public Works website, you will find additional project information
