Broadwater Farm parking suspension process

Below provides a summary of how the parking bay suspension process is carried out and managed on the estate.

Suspension notices

Suspension notices are sent to all residents in affected blocks two weeks before the suspension begins.

Suspension notices will include:

- The location of the parking bays being suspended.
- The start date of the suspension
- The end date of the suspension

If works are delayed or take longer than expected parking suspensions may be extended – updated notices will be displayed showing new start and finish dates.

Bay suspensions

- **All residents in the affected block will receive a suspension notice.** This notice will be delivered two weeks before the suspension begins.

- **A copy of this suspension notice will be displayed in affected parking area(s).** This will be displayed at the same time as notices are delivered to residents.

- **Notices will also be attached to vehicles.** A notice will be placed under the windscreen of all vehicles parked in the affected area. This will be followed by reminder notices in the lead-up to the suspension date, including a final reminder before the suspension comes into effect.

- **Parking enforcement notices will be displayed in affected parking areas.** These notices will be installed before the suspension begins and will advise residents that Parking Charge Notices (PCNs) will be issued to vehicles parked in suspended bays during the suspension period.

Contractor preparation

- **Reminder notices will be left on vehicles parked in the affected parking area.** This will include the first notice followed by a second and then final reminder in the run up to the start date of the suspension.

- **The parking suspensions will begin three days before works begins.** This is to allow vehicles to be cleared and barriers installed. Residents should not park in the bays even if they see other vehicles parked there and/or they can't see any work being undertaken. Residents should pay attention to the dates on the parking notices and not where other vehicles have been parked.

- **Vehicles still parked in suspended bays will be relocated -** If a vehicle is still parked in the suspended bay areas when DCK start to install barriers the vehicle will be relocated to another location (within line of sight of the original location). If a vehicle cannot be moved it may be enclosed within the barrier. If a vehicle is relocated or enclosed with the barrier it will be issued a PCN.

Parking enforcement

If a vehicle is parked in a suspended parking bay it will be issued with a PCN and be relocated to a secure location within line of sight of its original location.

Works cannot proceed with vehicles parked in suspended bays. If a vehicle cannot be moved this will delay the start and finish date for the necessary works in the affected parking area and cause longer term delays to the major works programme.

PCN's will also be issued if a vehicle is:

- parked on double yellow lines
- not parked correctly within a bay
- blocking access to other parking bays and/or is double parked
